Did you know?

- Leaves of a mature tree will provide enough oxygen to keep one person breathing for a year

- One moderately-sized tree has as much cooling effect in a city as 20 average room air conditioners running 20 hours per day, cooling an individual home as much as 12 degrees on a hot day.

- An average American uses about 750 pounds of paper every year, and 95% of homes are built using wood. That means each person uses the equivalent of one 100 foot tall, 16-inch diameter, tree every year for their paper and wood project needs.

- The oldest known tree is in Methuselah grove, a bristlecone pine, almost 4,900 years old, living high in the mountains on the Nevada/California border. The exact location of the tree is kept secret by the US Forest Service to protect it.

- With your help, the Morgan County SWCD has brought over 11,000 new trees into our community in the last 3 years!

THANK YOU!

2026-27 Morgan County Tree Giveaway Order Form

Trees are the longest living organisms on the planet and one of the earth's greatest natural resources. They keep our air supply clean, reduce noise pollution, improve water quality, help prevent erosion, provide food and building materials, create shade and help make our landscapes look beautiful.
This year's seedlings will be ordered from Vallonia State Nursery, whose mission is to grow and distribute to landowners high quality plant materials for conservation plantings. Conservation Plantings include plantings for timber, wildlife, windbreaks, soil and water protection, reclamation, carbon sequestering and education.

Trees ordered through this program will be available for pick up in the Spring of 2027.

We will contact you once trees have arrived to give you pick-up information. Please complete form entirely so that we can reach you!

Reserve your 10 trees today (or while supplies last) by one of these methods:

1. Go to our website to place your online order (QR code on reverse)
2. Mail-in or drop-off this order form at the SWCD office located at 180 S. Main Street, Suite 002, Martinsville, IN 46151
3. Email a picture of your order form to SWCDoffice@morgancounty.in.gov
4. Call us at: 765-349-2060

ORDERS WILL BE FILLED ON A FIRST COME, FIRST SERVED BASIS, WHILE SUPPLIES LAST!

YOUR CHOICES ARE:

Species	Mature Height	Soil & Habitat Preferences	Seed/Fruit Bearing Age	Light Needed	Value	# of this species you would like:
Red Oak	60-75 ft	Moist & well drained soils.	10 years	Full Sun	Acorns produced by this tree are a valuable food source for wildlife. Exhibits high tolerance to urban pollution and road salt.	
River Birch	40-70 ft	Medium to wet. Handles periodic flooding	10-15 years	Full Sun to Partial Shade	Its papery peeling bark is a distinctive and attractive feature. Excellent species for erosion control, managing stormwater runoff and supports local wildlife with its seeds.	
Pawpaw	20-25 ft	Moist, well drained	4-8 years	Full sun or partial shade	Pawpaw is the largest edible native fruit in Indiana for wildlife and humans. Pawpaw leaves are the only food source for the Zebra Swallowtail butterfly caterpillars.	
Hazelnut	8-15 ft	Well drained loamy soils near forest edge or in thickets	3 years	partial shade to full sun	Dense branches and foliage offer safe shelter, nesting spots, and food for birds and small mammals. Nuts and catkins feed local wildlife through the fall and winter months. Deep roots are excellent at erosion control	
Ninebark	3-10 ft	Moist, well-drained soil but is highly adaptable to various soil types	2-3 years	Full Sun to partial shade	Showy clusters of flowers that bloom in late spring. Attracts pollinators. Provides shelter, nesting sites, and food for birds that consume lingering seeds. It also serves as a host plant for various native moth species.	
					Total # of Trees Desired (Max. Total is 10 trees/shrubs)
